# INTRODUCTION

Simulated annual average air-sea CO<sub>2</sub> flux density in the Western Tropical Atlantic.

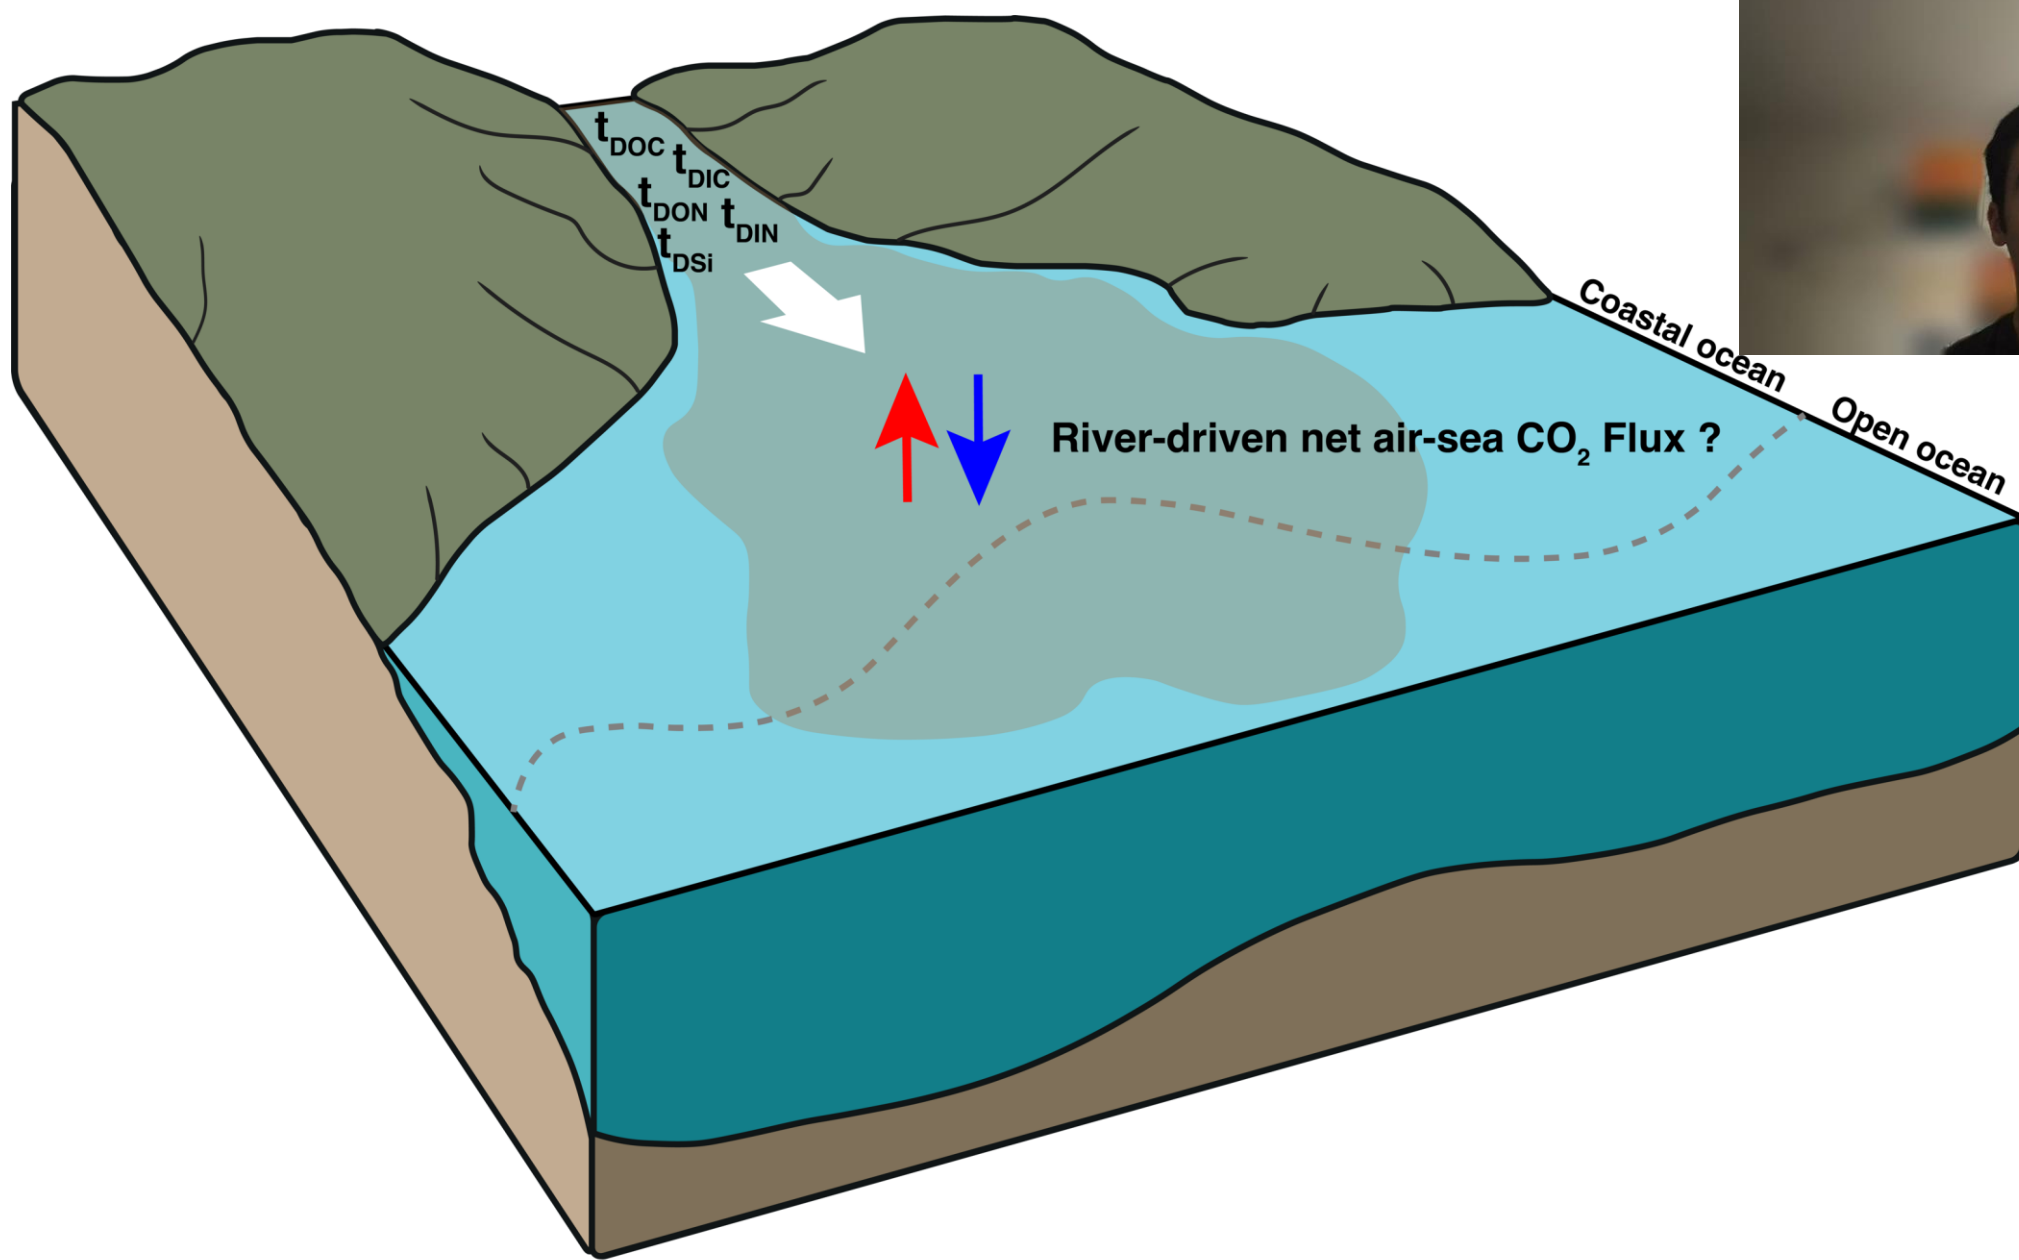

Louchard et al. (2021), *Global Biogeochemical Cycles*

Inland waters and rivers = about 1% of the Earth's surface but:

- Significant amount of carbon and nutrients delivered to the ocean
- From natural and anthropogenic sources
- Key role in ocean and coastal waters biogeochemistry

# OBJECTIVE

Quantifying the impact of terrestrial carbon and nutrients in ocean carbon chemistry and biology

# IMPLEMENTING DAILY, POINT-SOURCE DISCHARGE INTO AN OCEAN MODEL

Geosci. Model Dev., 14, 1801–1819, 2021

## Improved representation of river runoff in Estimating the Circulation and Climate of the Ocean Version 4 (ECCOv4) simulations: implementation, evaluation, and impacts to coastal plume regions

Yang Feng<sup>1,2,3</sup>, Dimitris Menemenlis<sup>4</sup>, Huijie Xue<sup>1,2</sup>, Hong Zhang<sup>4</sup>, Dustin Carroll<sup>4,5</sup>, Yan Du<sup>1,2,6</sup>, and

### Key point:

Simulated sea surface salinity better agrees with SMAP observations when considering daily point-source runoff and coarse resolution (ECCO LLC90).

# IMPLEMENTING DAILY, POINT-SOURCE DISCHARGE INTO AN OCEAN MODEL

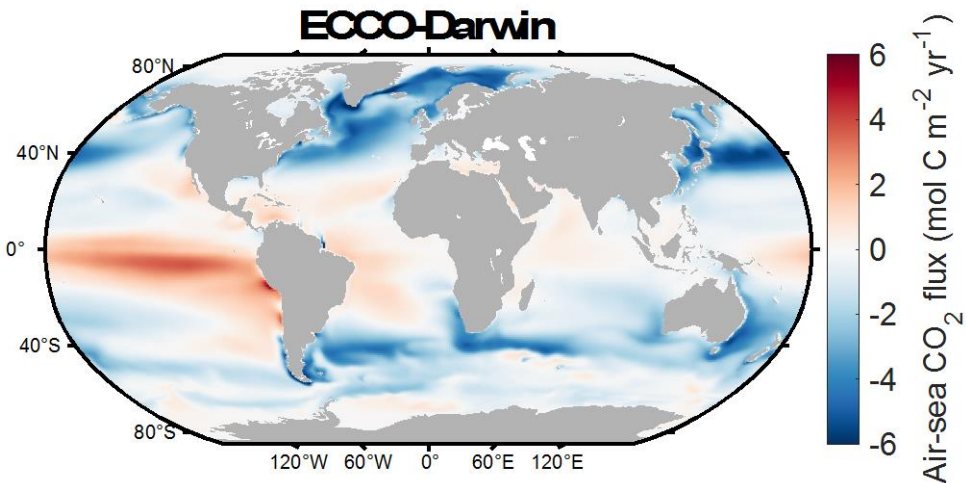

We combine different models to connect land and ocean:

	Model	Period	Grid	Variables of interest
Ocean Physics	ECCO	1992-present	1°	Sal., temp., mixing, transport
Ocean biogeochemistry	Darwin	1992-present	1°	Nutrients, carbon, phyto.
Daily discharge	JRA55-do	1958-present	55 km	Freshwater runoff
Annual carbon and nutrient discharge	Global NEWS 2	2000	Point	Dissolved organic and inorganic nutrients (C, N, Si)

# IMPLEMENTING DAILY, POINT-SOURCE DISCHARGE INTO AN OCEAN MODEL

- New ECCO-Darwin version at 1 degree of horizontal resolution (LLC90)
- A baseline simulation and 6 sensitivity experiments

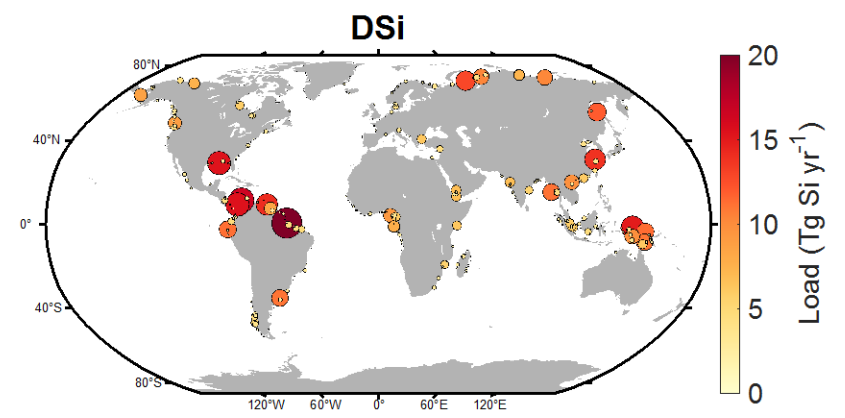

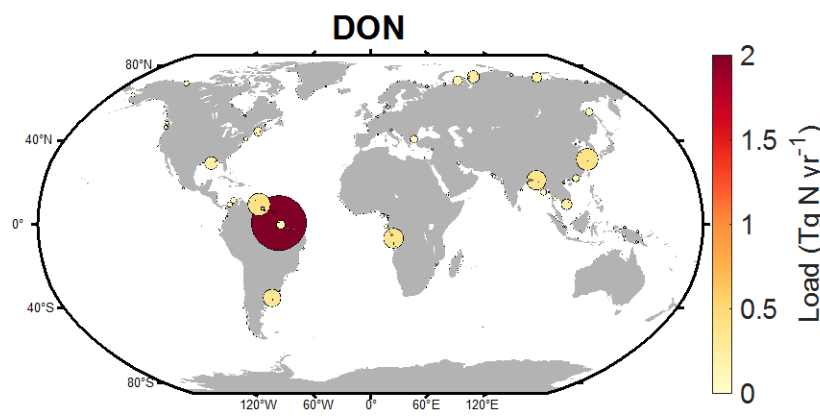

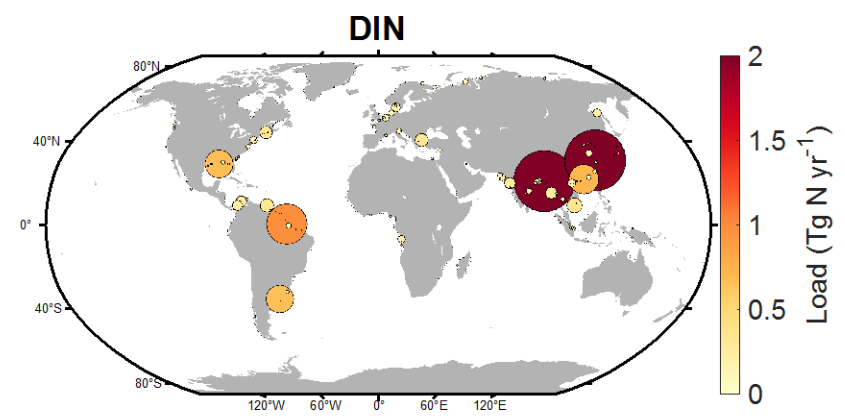

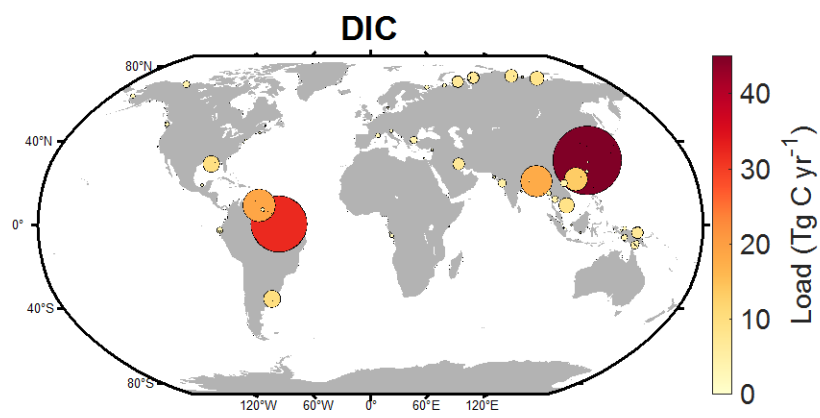

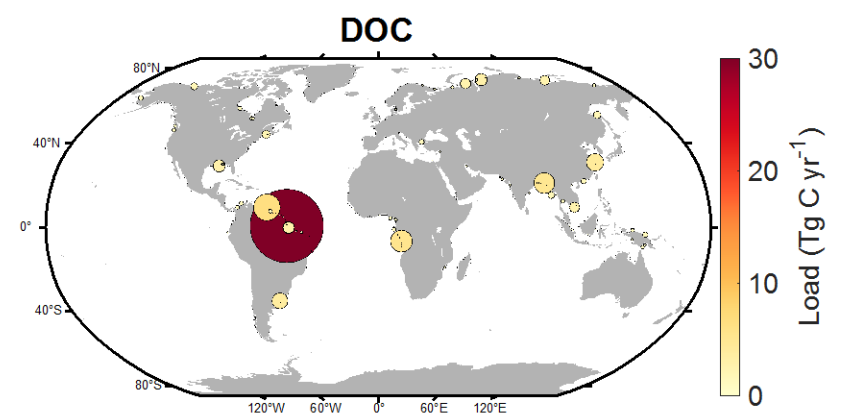

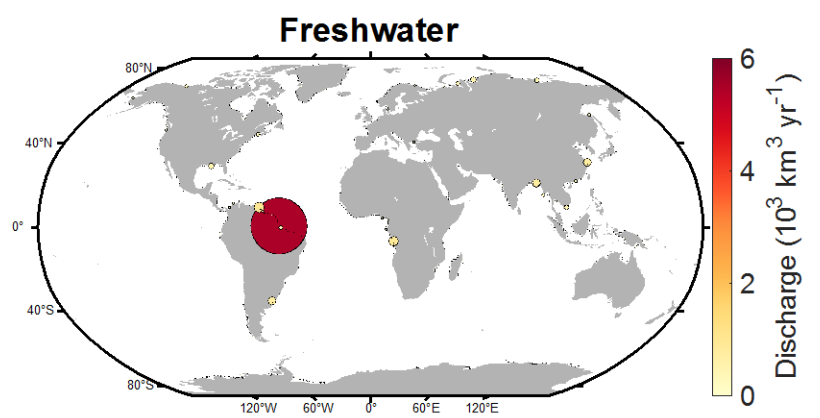

Name	DOC (Tg C yr <sup>-1</sup> )	DIC (Tg C yr <sup>-1</sup> )	DON (Tg N yr <sup>-1</sup> )	DIN (Tg N yr <sup>-1</sup> )	DSi (Tg Si yr <sup>-1</sup> )
DC <sub>run</sub>	170	381	0	0	0
DIC <sub>run</sub>	0	381	0	0	0
DN <sub>run</sub>	0	0	11.6	23.3	0
DIN <sub>run</sub>	0	0	0	23.3	0
DSi <sub>run</sub>	0	0	0	0	139.7
ALL <sub>run</sub>	170	381	11.6	23.3	139.7

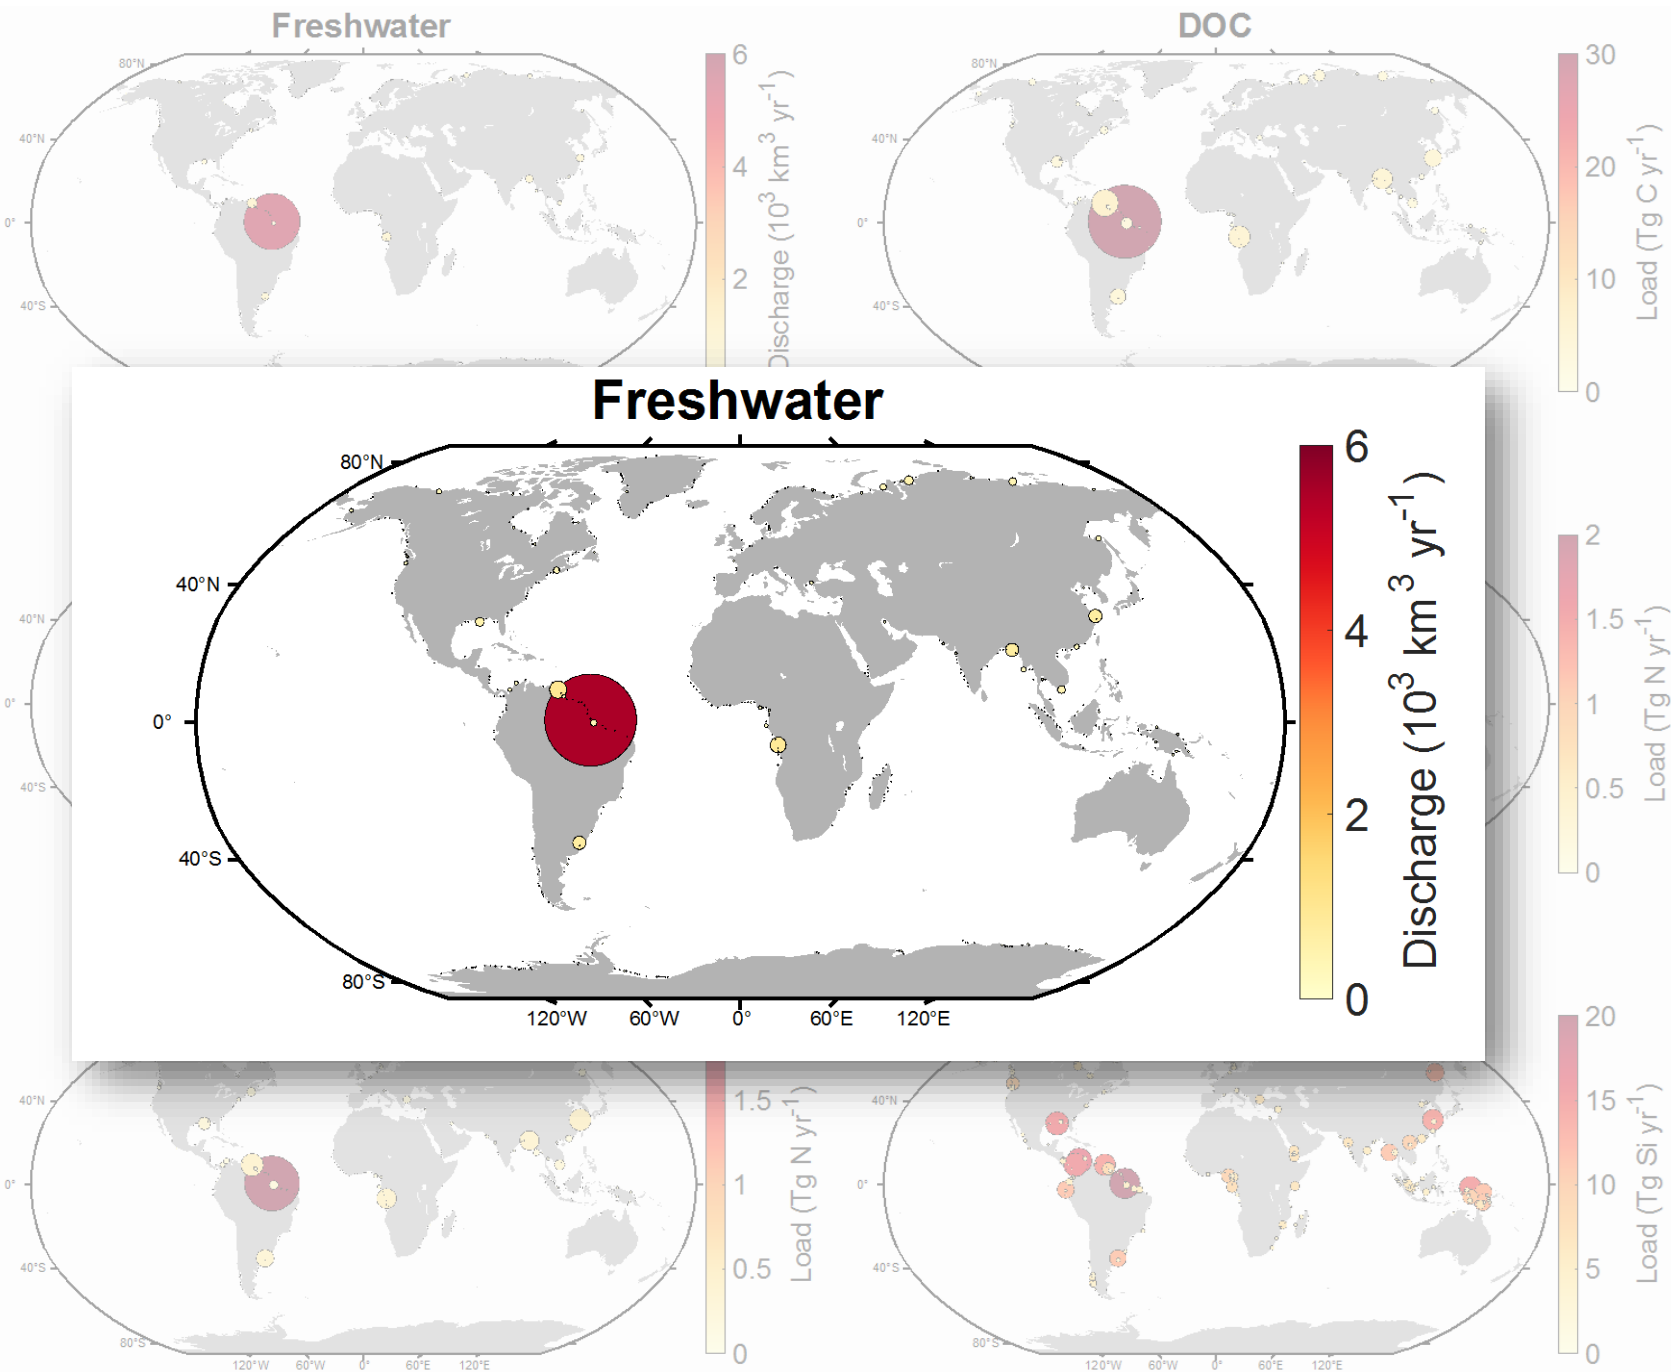

# GLOBAL NUTRIENT DISCHARGE

Contrasting patterns in C/nutrient discharge:

- Arctic and Tropical Atlantic are dominated by dissolved carbon
- Southeast Asia is dominated by dissolved inorganic nitrogen

# GLOBAL NUTRIENT DISCHARGE

Contrasting patterns in C/nutrient discharge:

- Arctic and Tropical Atlantic are dominated by dissolved carbon
- Southeast Asia is dominated by dissolved inorganic nitrogen

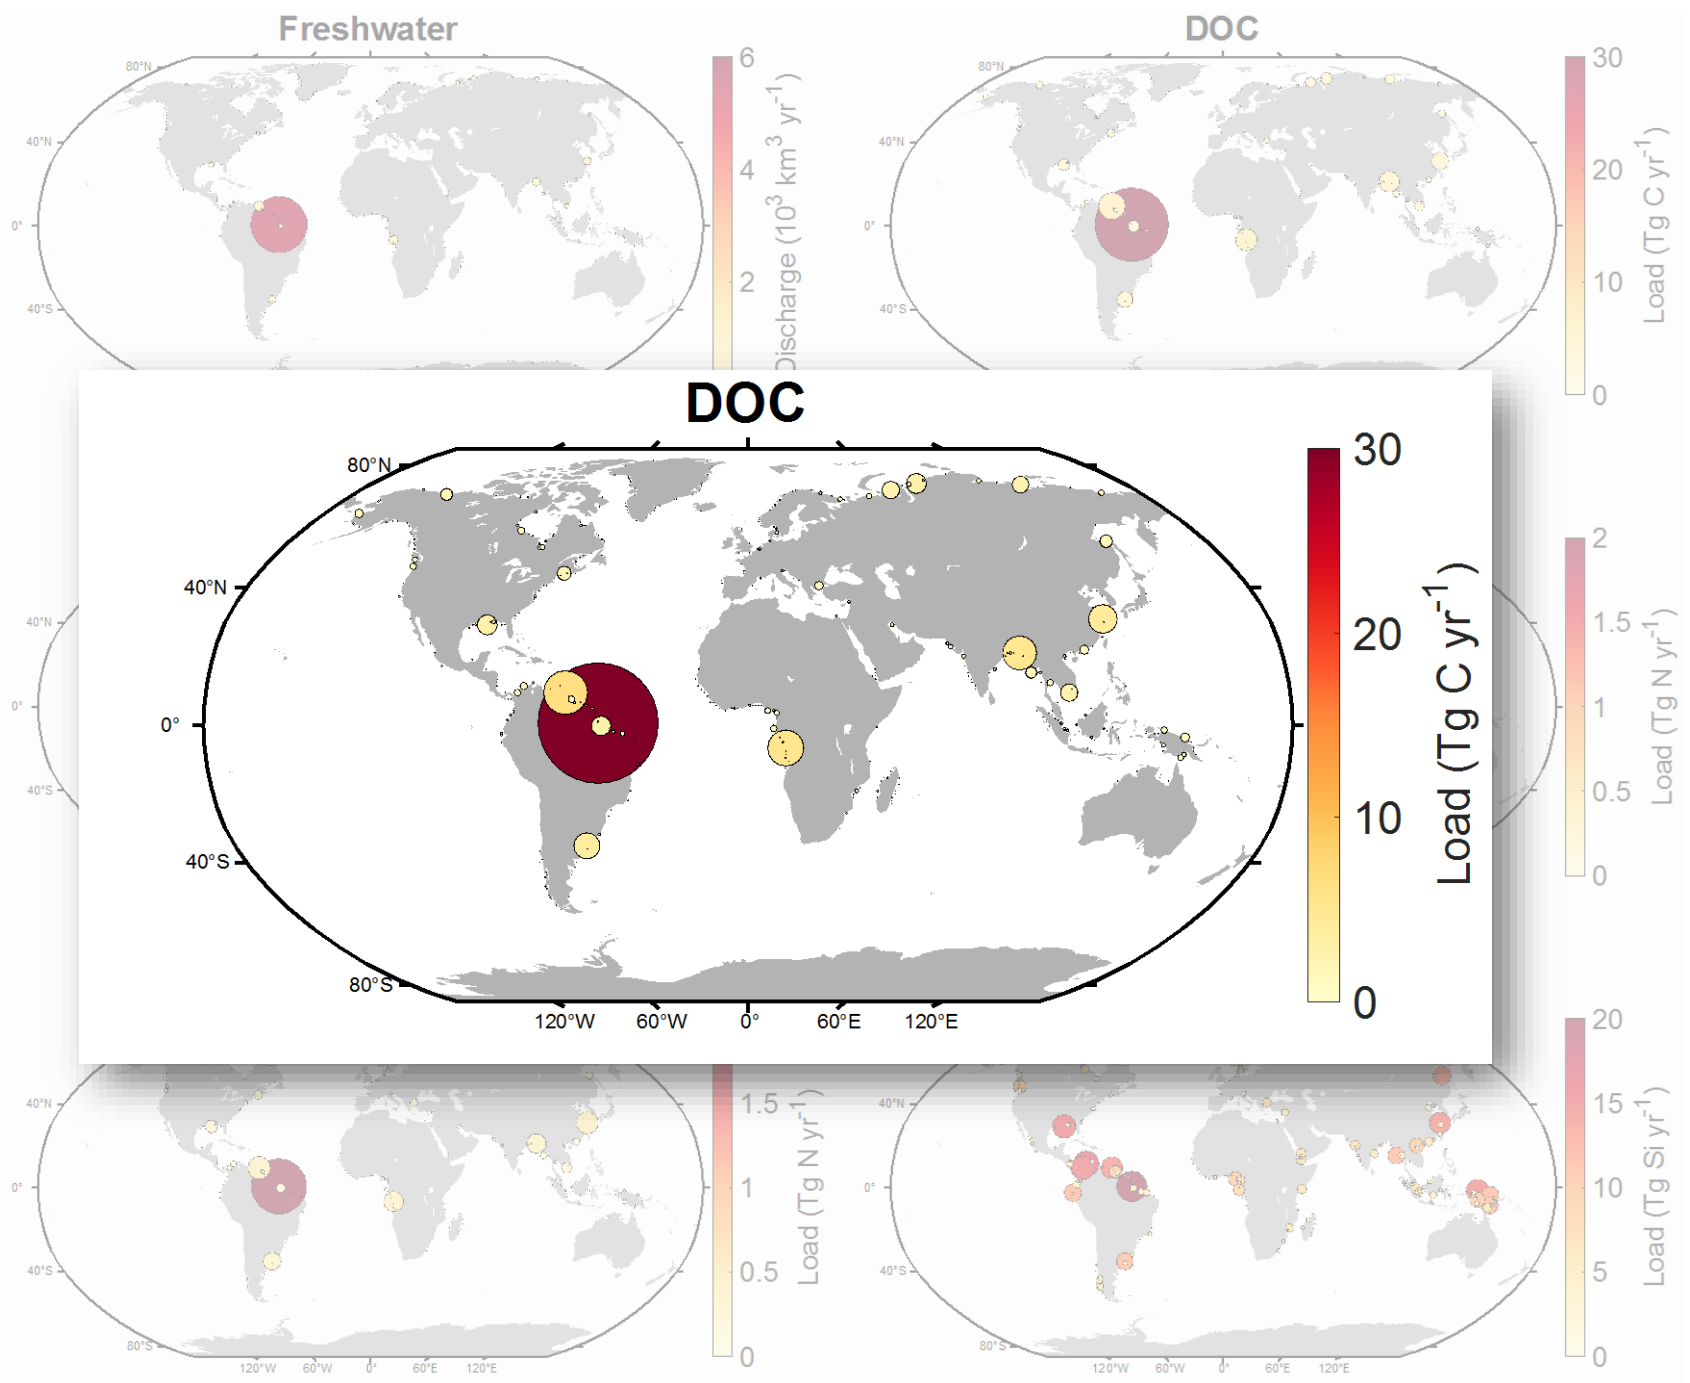

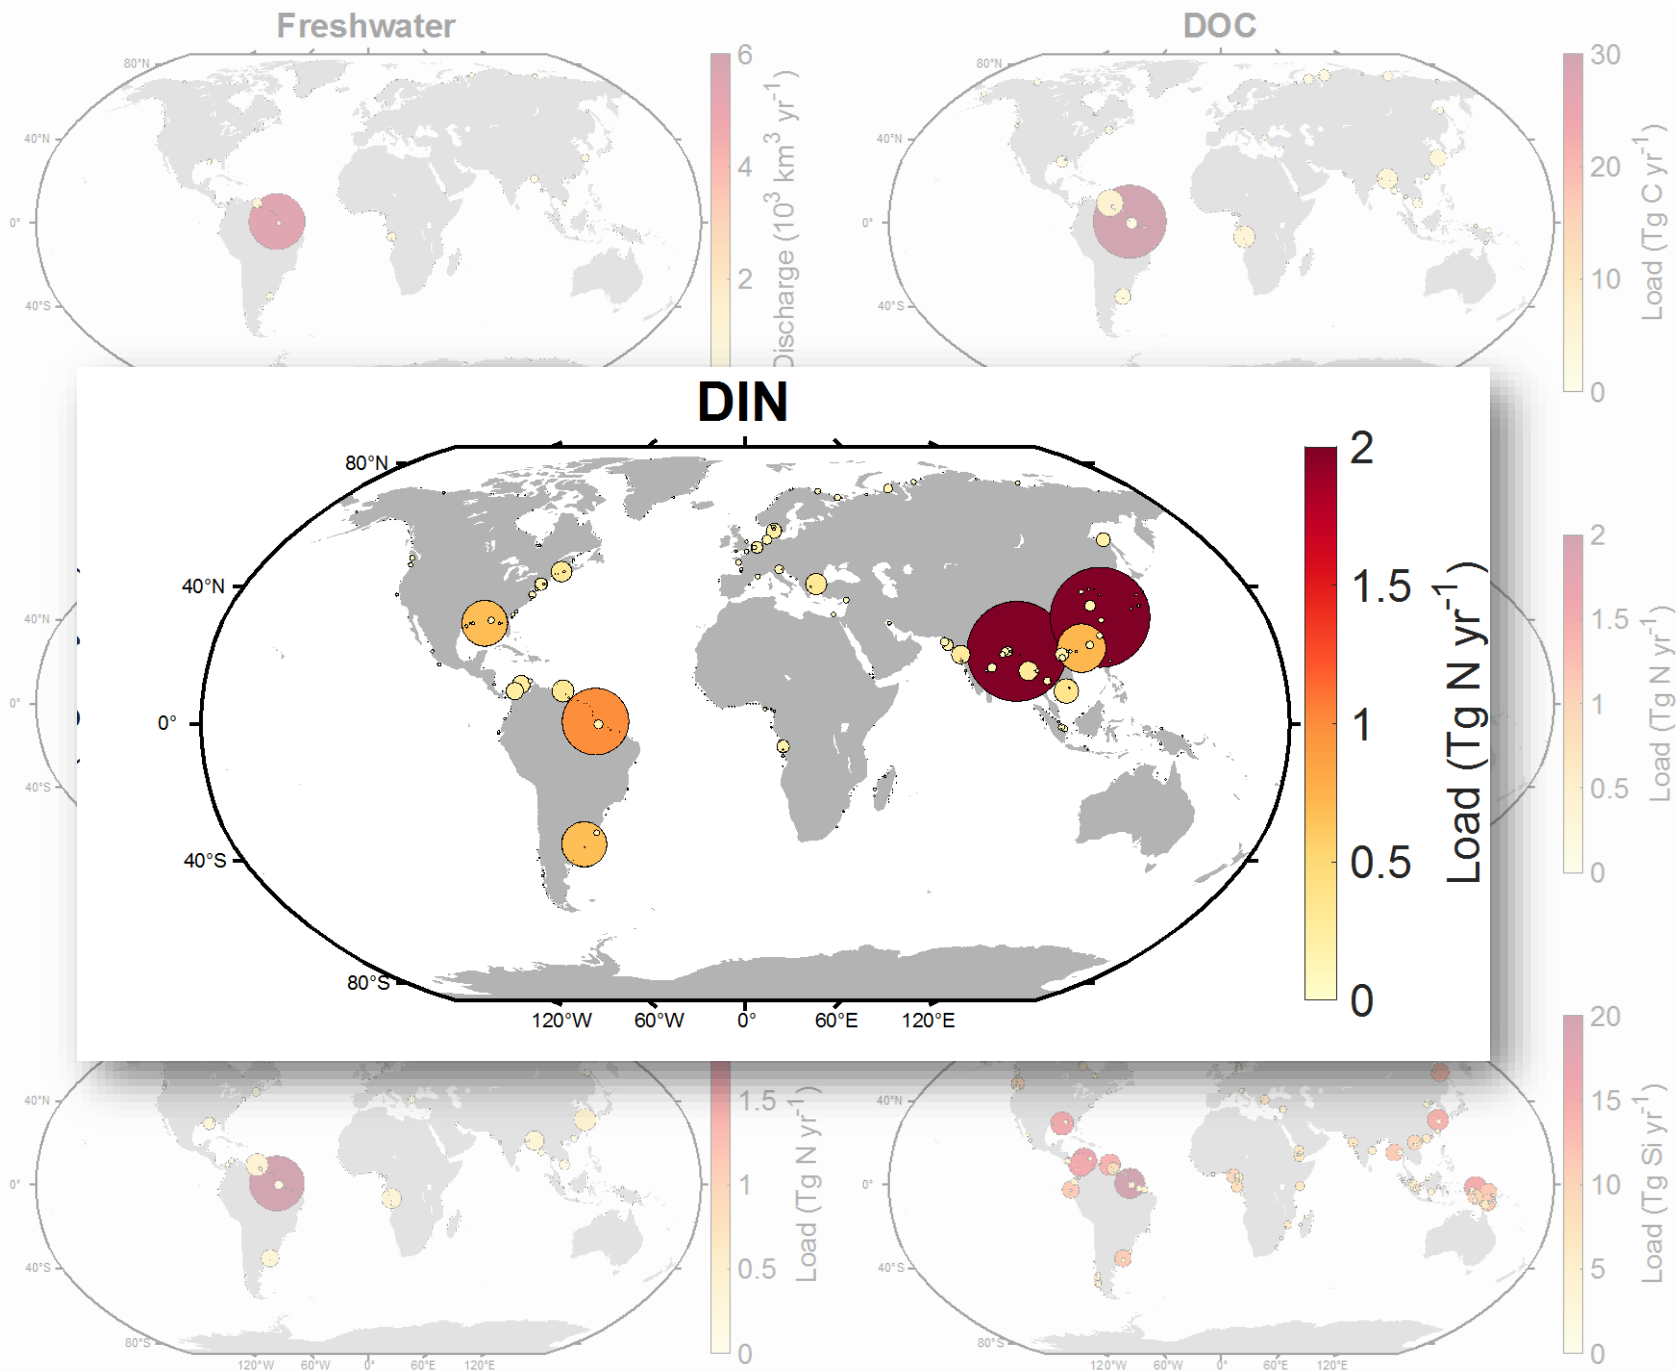

# GLOBAL NUTRIENT DISCHARGE

Contrasting patterns in C/nutrient discharge:

- Arctic and Tropical Atlantic are dominated by dissolved carbon
- Southeast Asia is dominated by dissolved inorganic nitrogen

# GLOBAL NUTRIENT DISCHARGE

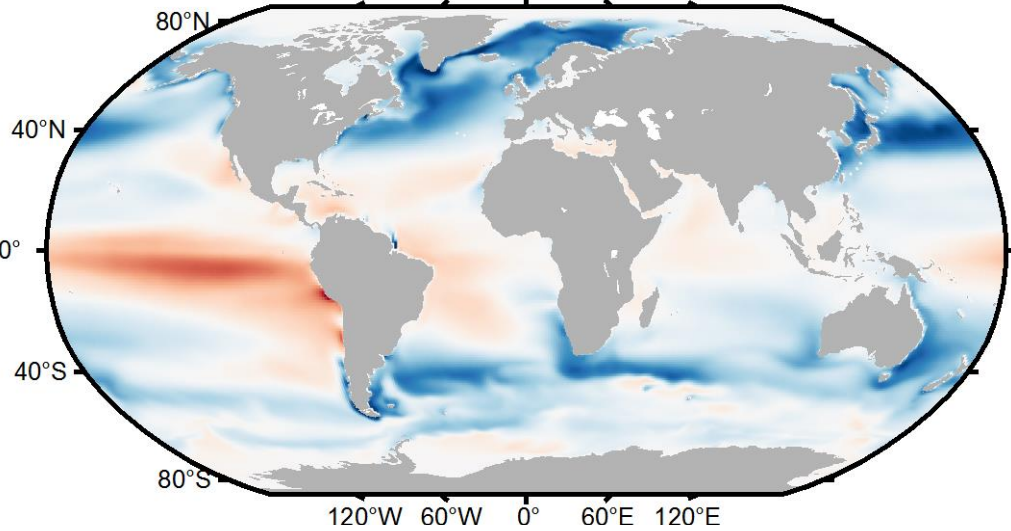

Contrasting patterns in C/nutrient discharge:

- Arctic and Tropical Atlantic are dominated by dissolved carbon
- Southeast Asia is dominated by dissolved inorganic nitrogen

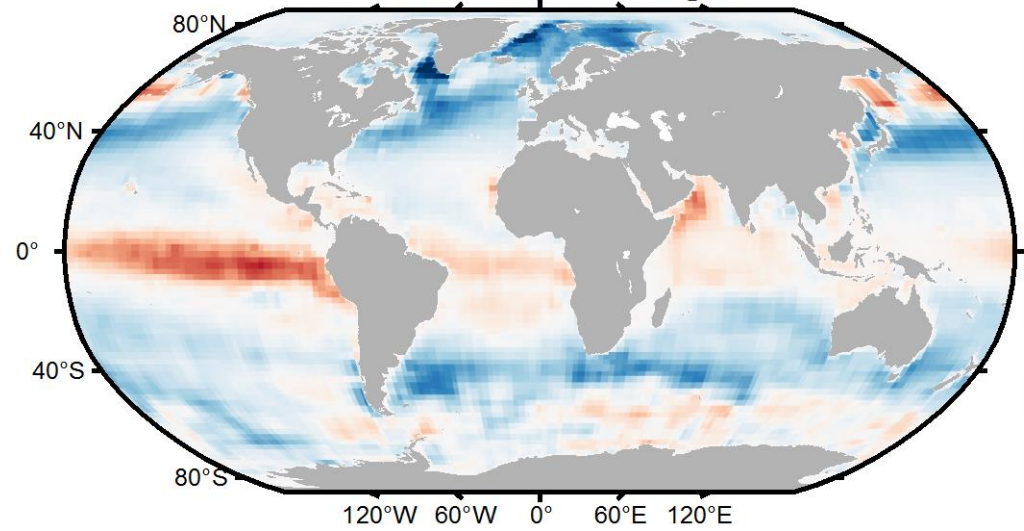

# GLOBAL AIR-SEA CO<sub>2</sub> FLUX SENSITIVITY

**ECCO-Darwin**

Baseline simulation

**Jena CarboScope**

Jena CarboScope v2023  
(Rödenbeck, 2005)

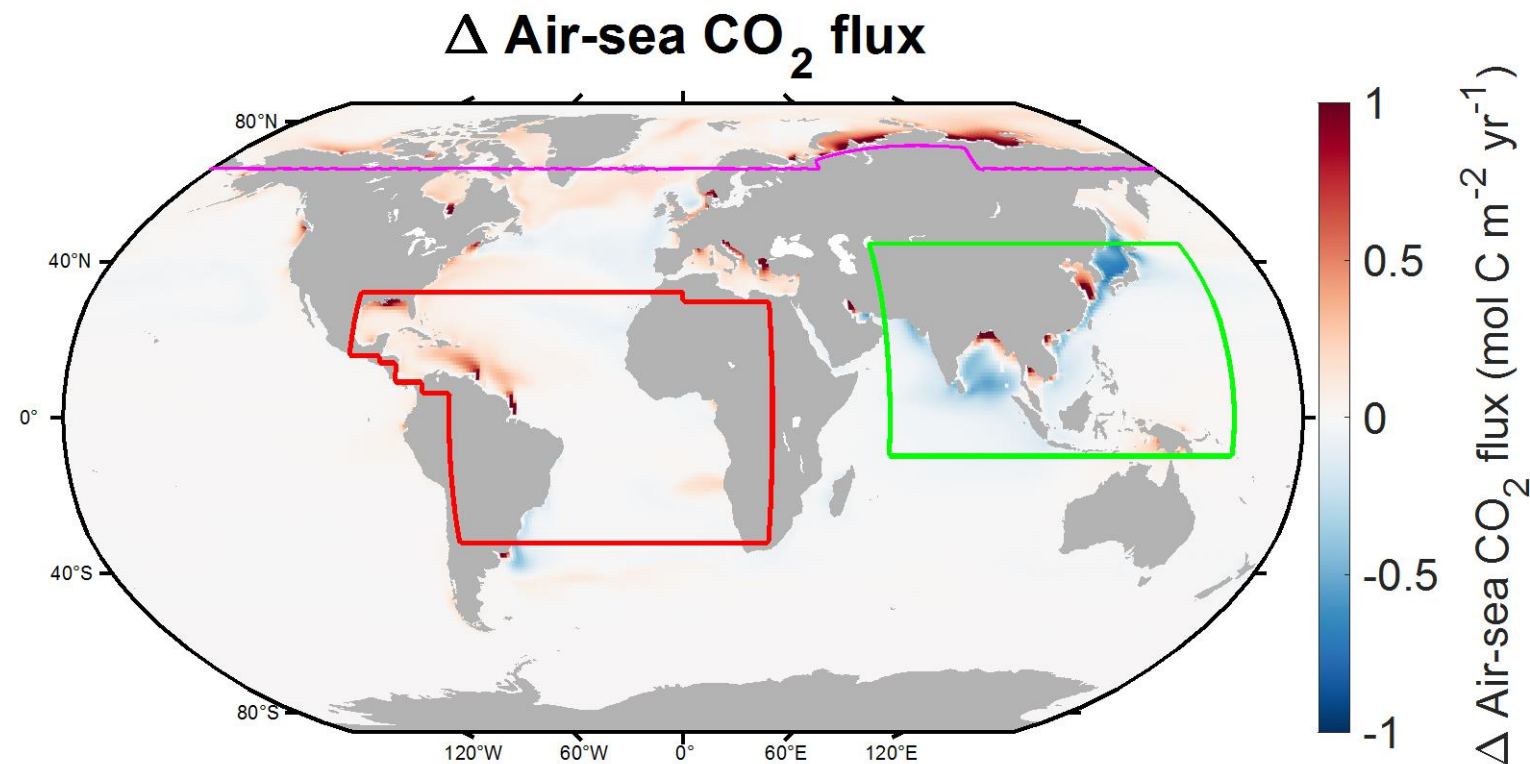

→ How does the simulation with riverine carbon and nutrients differ from the baseline ?

# GLOBAL AIR-SEA CO<sub>2</sub> FLUX SENSITIVITY

Including riverine C/nutrients generally increases ocean CO<sub>2</sub> outgassing:

- Global: **+1.5%** (**+0.03 Pg C yr<sup>-1</sup>**)
- Arctic Ocean: **+10%**
- Tropical Atlantic: **+20%**
- Southeast Asia: **-9%**

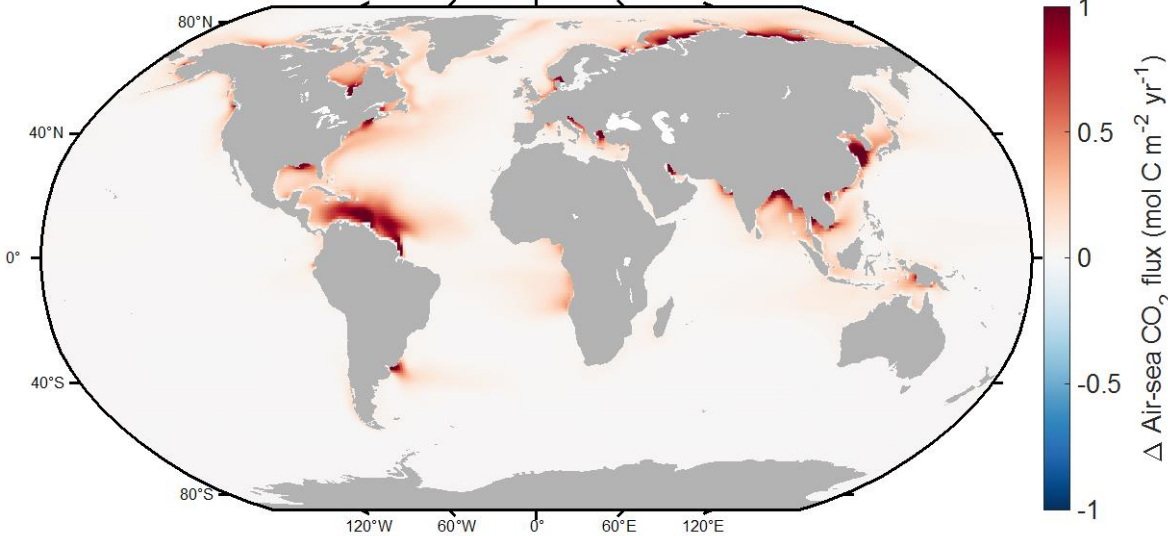

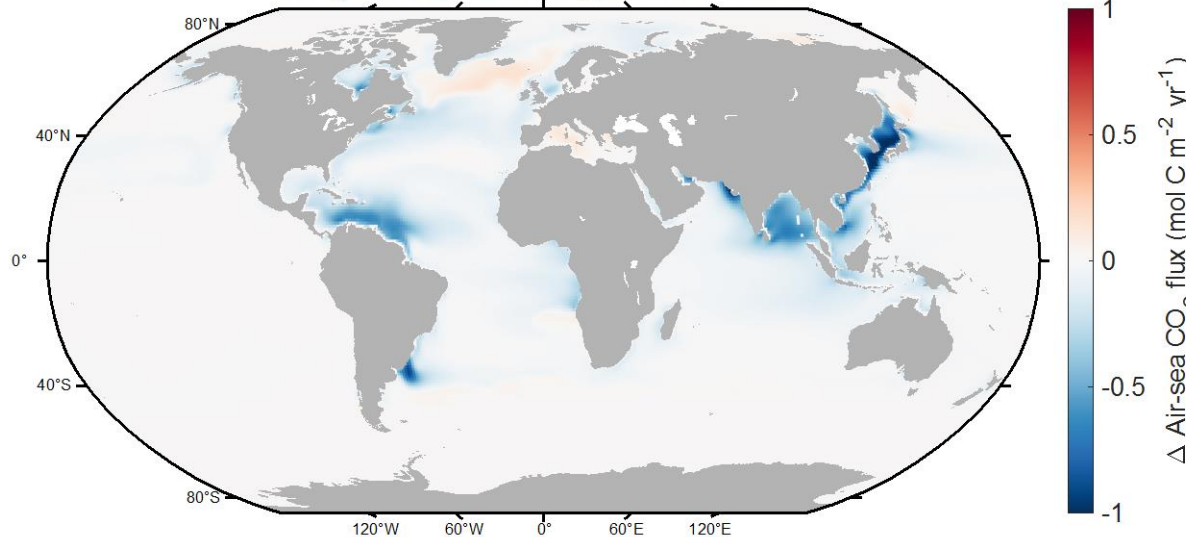

# GLOBAL AIR-SEA CO<sub>2</sub> FLUX SENSITIVITY

Only dissolved carbon from rivers

Only dissolved nitrogen from rivers

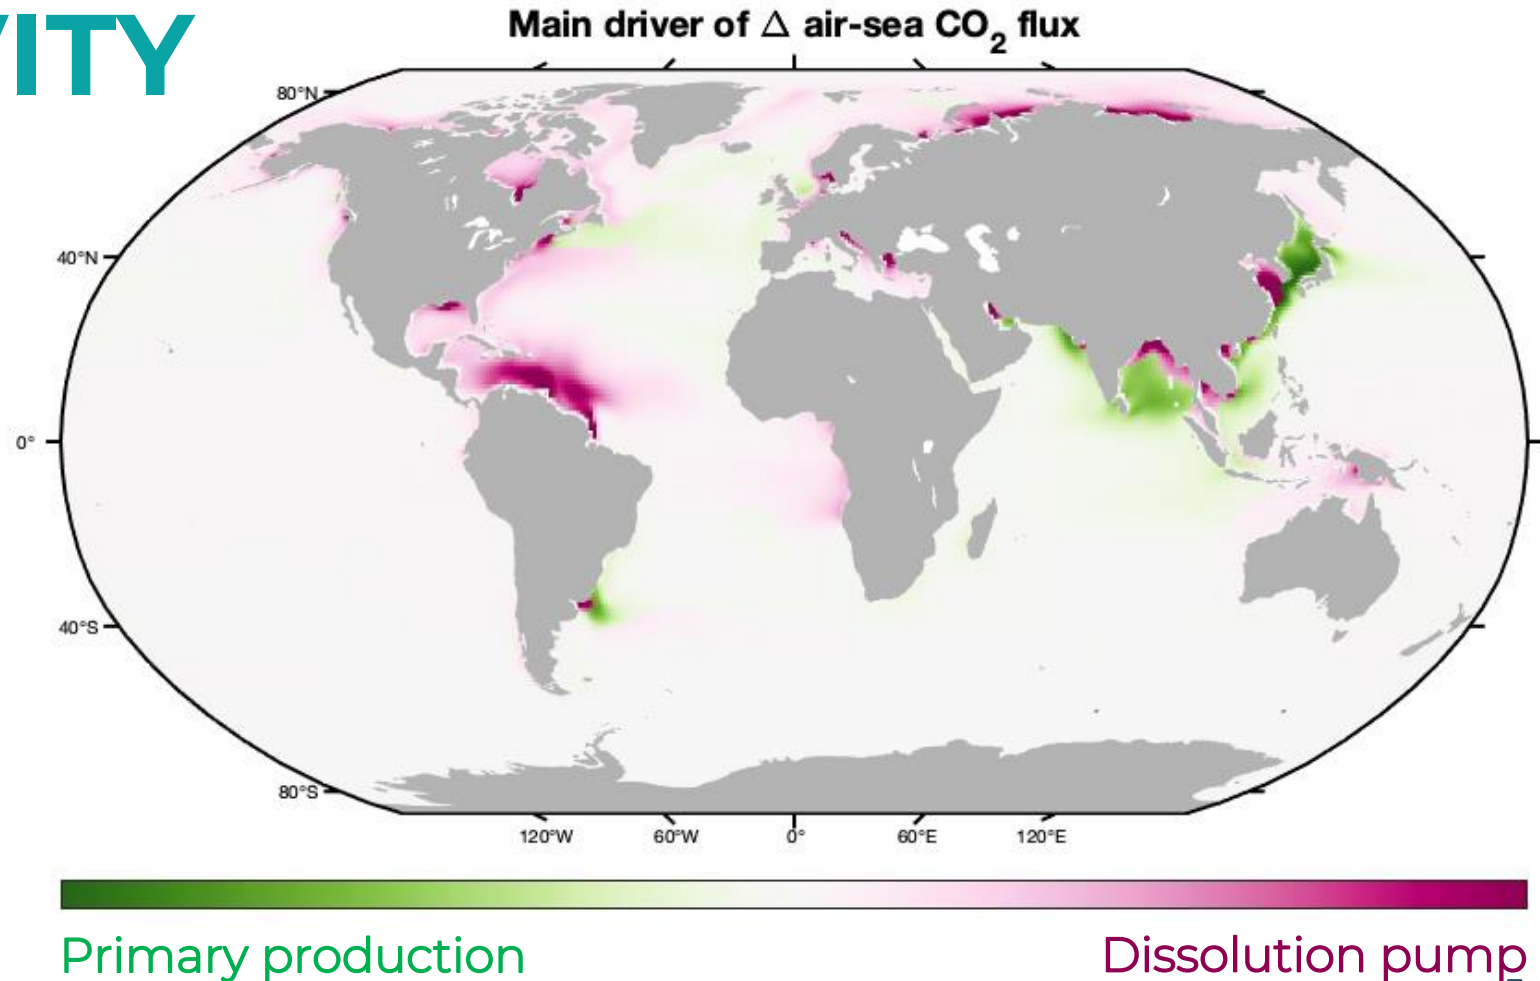

Riverine carbon and nitrogen play different roles in ocean biogeochemistry:

- **C** runoff drives more **outgassing** through physical/dissolution pump
- **N** runoff drives more **ingassing** through primary production

# GLOBAL AIR-SEA CO<sub>2</sub> FLUX SENSITIVITY

- Change in air-sea CO<sub>2</sub> flux associated with the **dissolution pump** prevails next to big rivers mouths
- **Primary production** is controlling change in air-sea CO<sub>2</sub> flux further out

# SUMMARY

## River-driven net air-sea CO<sub>2</sub> flux

■ River plume

# SUMMARY

## River-driven net air-sea $\text{CO}_2$ flux

■ River plume

■ River-impacted dissolution of carbon

⤴ Nutrient remineralization  
↑ ↓ Air-sea  $\text{CO}_2$  flux

# SUMMARY

## River-driven net air-sea CO<sub>2</sub> flux

- River plume
- River-enhanced marine biological production
- River-impacted dissolution of carbon

- Nutrient utilization during production
- Nutrient remineralization
- Air-sea CO<sub>2</sub> flux

# SUMMARY

## River-driven net air-sea CO<sub>2</sub> flux

- River plume
- River-enhanced marine biological production
- River-impacted dissolution of carbon

- Nutrient utilization during production
- Nutrient remineralization
- Air-sea CO<sub>2</sub> flux

# SUMMARY

## River-driven net air-sea CO<sub>2</sub> flux

C-dominated margins

TROP-ATL, ARCT

Global

SE-ASIA

N-dominated margins

- River plume
- River-enhanced marine biological production
- River-impacted dissolution of carbon

- Nutrient utilization during production
- Nutrient remineralization
- Air-sea CO<sub>2</sub> flux

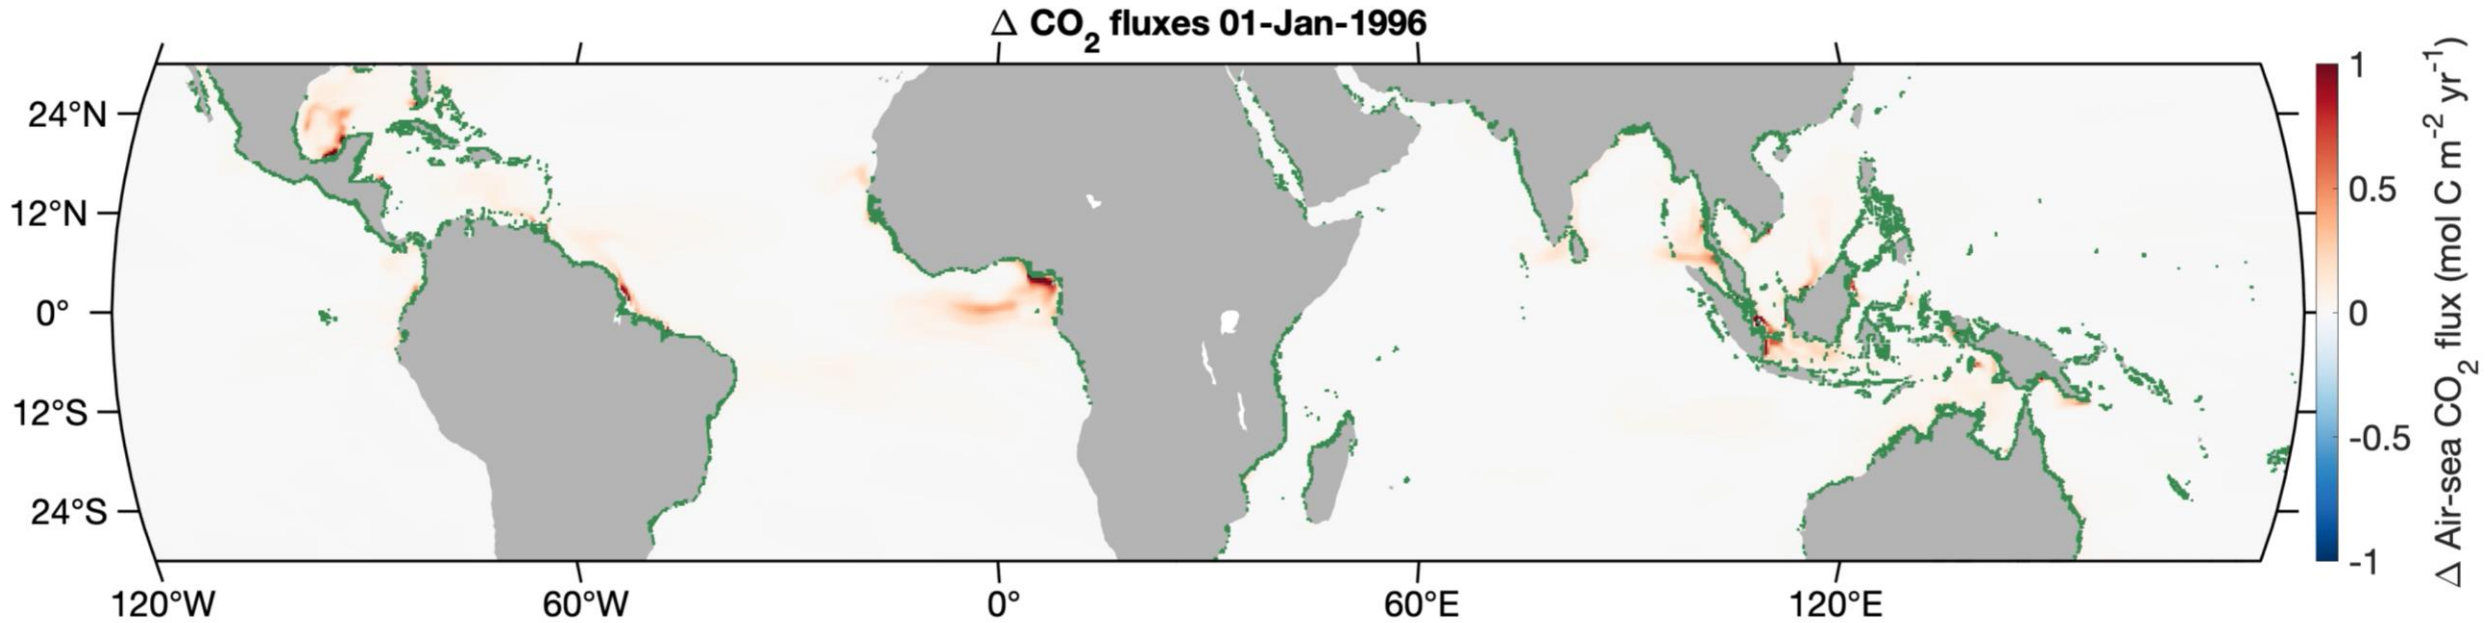

# WHAT ABOUT CARBON FROM COASTAL WETLANDS

?

Change in air-sea CO<sub>2</sub> flux associated with export of carbon from mangroves

# THANK YOU.
